Sector Spotlight: Mining

Shupekile Mwanza

Regional Senior Advisor, Cyber Security

World Vision International

“Trust-by-design for Zambia’s AI-powered growth.”

 **The 2012 Lesson: Sinazongwe & Mazabuka**

We used SMS alerts to help expectant mothers keep ANC visits. Success came not from tech alone, but by engaging government, negotiating telco pricing with Airtel, and localising languages. **Core Lesson: Access + Trust + Affordability = Adoption.**

 **Regional Cyber Advisory:** Governance, risk, resilience, and secure-by-design delivery across multi-country environments.

 **Inclusion Lens:** Focusing on accessibility, local language UX, low-literacy journeys, and low-data/offline patterns.

 **Partnership Muscle:** Bridging government, private sector, and communities—because scale never happens alone.

Zambia 2031 — What Do You See?

Don't imagine the tech—imagine the outcome.

Agriculture

"What does a smart farm look like where yields are predictable?"

Banking

"What does AI-enabled finance look like for the unbanked?"

Health

"What does universal access look like in rural clinics?"

Education

"What does personalized, offline-first learning look like?"

Mining

"What do safer, more predictive operations look like?"

Turn to someone next to you: Share one 2031 outcome your sector must deliver.

The AI-Powered Bridge
Linking Infrastructure, Innovation, and Inclusion for Impact

AI Scales if these are in place

Innovation

AI Solutions

Smart Procurement

Ecosystem

Deployment at Scale

Inclusion

Affordability

Disability Access

Policies

Digital Literacy

 **TRUST** Cybersecurity • Privacy • Reliability

 **MEASUREMENT** Outcomes • Delivery Dashboards

Beyond Connectivity — Enabling Utilization

 **Access does not equal adoption**

The Utilization Gap

-  **Device Affordability:** Feature phones vs. Smartphones cost barrier
-  **Rural vs. Urban:** Coverage exists, but power reliability varies
-  **Manual Workflows:** Digitisation often stops at the head office
-  **Offline Constraints:** Apps fail when connectivity drops

"Infrastructure alone is not enough. The real question is—are people using it?"

Design Levers for Scale

Low-Data & Offline-First

Local Language Interfaces

Disability-Inclusive UX

Shared Public Wi-Fi (ZamFree)

Connectivity vs
Usage Gap

**Access does not equal adoption.
Coverage gains must translate
into everyday value.**

DESIGN PRIORITIES:

- ✓ Low-literacy
- ✓ Local-language Interface
- ✓ Disability-inclusive Design

Mobile Subscriptions (2024)

23.2M

Active SIMs vs population
High Coverage

Internet Usage

11.4M

Active users vs 13.5M subs
Usage Gap

Mobile Money (2024)

Local Innovation Story

Maternal mHealth: From SMS to AI-Powered Future

2012 Sinazongwe & Mazabuka

The Challenge

High rate of missed ANC visits due to long distances to clinics and lack of communication.

SMS Alerts Solution

Automated SMS reminders sent to expectant mothers and health posts for upcoming appointments.

Key Success Drivers

Strong govt engagement, localized language content, and negotiated affordable pricing with Airtel.

Proven Impact:

Significantly increased clinic attendance and reduced maternal deaths in pilot districts.

2031 AI-Powered Upgrade

AI Voice & Translation

Real-time voice bots in local languages (Tonga, Bemba, Lozi) for illiterate users.

Predictive Analytics

AI risk scoring to predict no-shows and high-risk pregnancies before complications occur.

Smart Logistics

Automated transport coordination for high-risk mothers using predictive demand modeling.

Sustainability Note:

Must maintain rural-friendly pricing models (ZMW) and offline-first architecture.

HH challenges ICTAZ

Urges association to revolutionise country's production systems

I'm for you, Mushanga assures HH

CHISHALA MUSONDA
Livingstone
PRESIDENT Hakainde Hichilema (PP) Bwacha Member of Parliament (MP) Sydney Mushanga has thrown his weight behind President Hakainde Hichilema and the UPND ahead of the August 13 general election.

HH engages OMCs amid global fuel snarl

CHISHALA MUSONDA
Livingstone
PRESIDENT Hakainde Hichilema has challenged the Information and Communications Technology Association of Zambia (ICTAZ) to take a leading role in transforming the country's production systems through innovation and digital solutions to accelerate economic growth.
Mr Hichilema said technology must move from being a support service to becoming a central driver of productivity across key sectors like agriculture, mining, energy and manufacturing.
